

About Transitions® Lenses

Transitions lenses – the #1 recommended photochromic lenses worldwide – are the ideal everyday choice for healthy sight. They are clear indoors and at night. Outdoors, they automatically darken as light conditions change. Transitions lenses provide visual comfort, enhance visual quality and reduce glare, helping you to see better today. Transitions lenses block 100 percent of harmful UVA and UVB rays – helping to protect the health and wellness of your eyes – so you can see better tomorrow as well.

Transitions lenses offer the latest and most advanced photochromic lens technology and set a new standard of advanced performance, providing even more visual quality, visual comfort and eye protection than ever before.

Performance:

- Clearer indoors – While most consumers and eyecare professionals were satisfied with the clarity of previous generations, today's Transitions lenses are even clearer. Transitions lenses are as clear as regular lenses indoors and at night.
- Darker outdoors – Transitions lenses become truly sunglass-dark outdoors. They are also faster to darken and also get darker outdoors in hotter temperatures.
- Transitions lenses are available in the most popular and widest range of materials and designs and can be fitted in nearly any frame – offering a fashionable and functional pairing for prescription lens wearers.
